WILLIAMS SOLAR

RSPCA Llys Nini Animal Centre

In a meaningful step toward sustainable operations and environmental responsibility, Williams Solar Division has successfully completed the installation of a state-of-the-art solar ground mount system at RSPCA Llys Nini Animal Centre.

The project, which underscores both organizations' commitment to green energy, Williams were involved with the design and installation of a ground-mounted system to meet a significant portion of the centre's electricity needs. The new system is expected to substantially reduce the centre's carbon footprint and energy costs, freeing up more resources for its vital animal welfare work.

The ground mount system, which spans a designated area on the property, is designed for maximum efficiency and minimal environmental disruption. The system was designed carefully to allow future expansion.

With this new installation, RSPCA Llys Nini is projected to offset several tonnes of CO_2 emissions annually whilst reducing its electrical bill massively.

The collaboration marks another milestone for Williams Solar Division, which has rapidly built a reputation for delivering reliable, high-performance solar solutions across Wales and beyond.

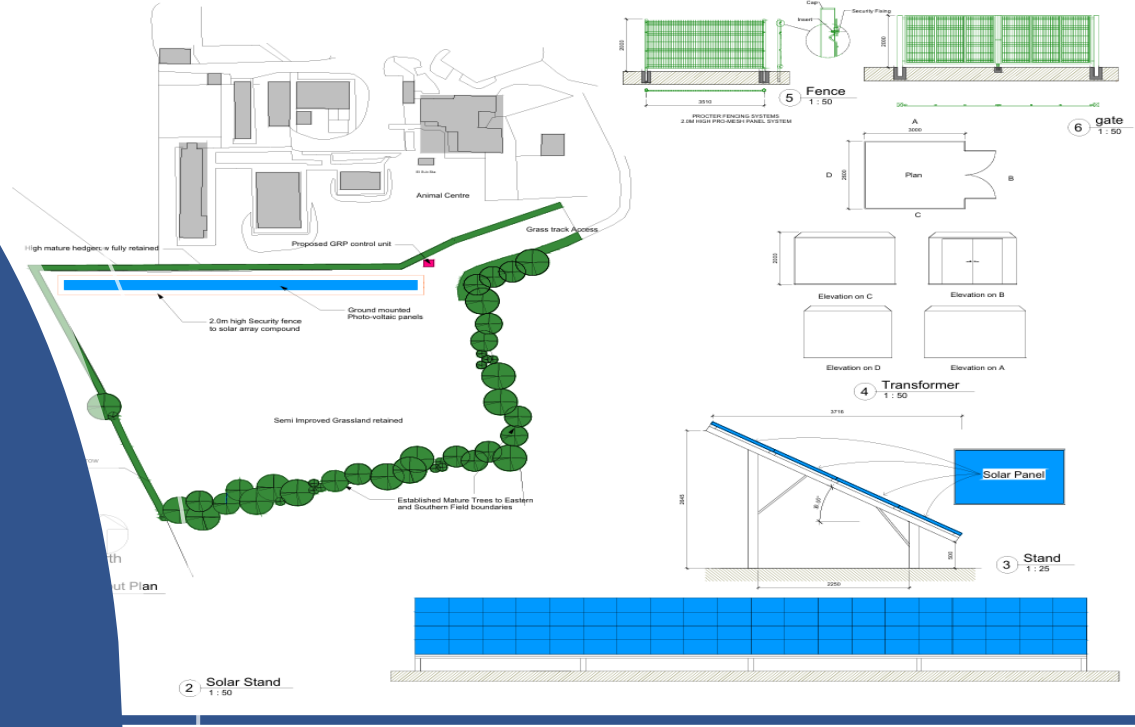
In house Design Team

At Williams Solar/Electrical, our in-house design team is committed to delivering customized solutions for projects of all sizes—from small residential setups to large commercial developments. We specialize in efficient electrical layouts and solar energy systems tailored to your specific needs.

Whether you're looking to reduce energy bills with solar panels and battery storage or need a comprehensive electrical design, our experts ensure seamless integration and long-term performance. From concept to completion, Williams Solar/Electrical provides professional design support every step of the way.



- All Applications required to comply with national grid.
- Planning Applications for Ground mount systems.
- Domestic and Commercial electrical system designs.
- Alternating Current electrical system designs.
- All solar & battery designs.
- Building works for ducting and grp housing bases.
- Fencing to complete Ground mount system.

WILLIAMS SOLAR

Gelli Aur Agricultural College

Williams Solar is proud to have designed and installed a solar energy system for Carmarthenshire council at Gelli Aur Agriculture College, aimed at helping them reduce their electrical bills and carbon footprint. As part of this project, we installed solar panels on the roof of one of their barns, providing a sustainable and cost-effective energy solution. This installation is expected to significantly lower the colleges and farm reliance on grid electricity, while supporting their commitment to environmental responsibility and energy efficiency.

With energy prices continuing to rise and the urgency of climate change growing, projects like this highlight how local partnerships can lead to real, lasting change. Both Williams Solar and Gelli Aur collage hope this installation will serve as a model for other Agriculture businesses and organizations looking to make the switch to renewable energy.
